

K. J. SOMAIYA COLLEGE OF SCIENCE AND COMMERCE

AUTONOMOUS – Affiliated to University of Mumbai Re-accredited "A' Grade by NAAC Vidyanagar, Vidyavihar, Mumbai 400077

Syllabus for M.Sc.

Program: M.Sc. Inorganic Chemistry From the academic year 2020–2021

Preamble of the syllabus

- Master of Science (M.Sc.) in Chemistry is a two-year full-time post-graduation course offered by the Department of Chemistry, K. J. Somaiya College of Science and Commerce (Autonomous).
- In our M.Sc course Sem III and Sem IV students will have specialization in Inorganic Chemistry.
- In semester IV instead of practical students will carry out project work for month duration in college research laboratories.
- Each course is framed to meet the following programme outcomes:
- PO1: Cutting-edge Knowledge, fundamental principles of Environmental Science
- PO2: Scientific methods, Problem Analysis and critical thinking
- PO3: Design/development of solutions
- PO4: Conduct investigations of complex Problems,
- PO5: Integrating technology tools
- PO6: The Graduate and society
- PO7: Environment, sustainability and Legitimacy
- PO8: Moral values and responsibility
- PO9: Individual and team work
- PO10: Communication
- PO11: competitive exams Entrepreneurship, Project management and finance
- PO12: Life-long learning

Programme Specific Outcome (PSO)

PSO (Inorganic): The students will learn solid state chemistry, group theory, bioinorganic chemistry, spectroscopic techniques, industrially important materials, instrumental techniques, Nano chemistry, structure determination, study of different compounds such as coordination compounds, cage and cluster compounds and environment and green chemistry.

M.Sc. – II Inorganic Chemistry Semester III Course Code – PSICH 301 Solid State and Group Theory

	Module – I	
1	Solid state II	15 L
1.1	Factors influencing the crystal structures : general formulae, valences, coordination numbers, bonding, ions and ionic radii, ionic structures – general principle, radius ration rule, border line radius ratio and distorted structure, lattice energy of ionic crystal, Kapustinskiis Equation	05 L
1.2	Corner sharing: tetrahedral structure (Silicates) and octahedral structure (ReO ₃) and rotation of ReO ₃ resulting in VF ₃ , RhF ₃ and calcite type structures.	05 L
1.3	Edge sharing: tetrahedral structures (SiS ₂) and octahedral structures (BiI ₃ and AlCl ₃). pyrochlores, octahedral tunnel structures and lamellar structures.	03 L
1.4	Solid state reactions : General principles and factors influencing reactions of solids, Reactivity of solids.	02 L
	Module – II	
2.	Imperfection in crystals and Non- Stoichiometry	15 L
2.1	Point defects : Point defects in metals and ionic Crystal – Frenkel defect and Schottky defect. Thermodynamics formation of these defects (mathematical derivation to find defect concentration and numerical problems expected); Defects in non-Stoiochiometric Compounds, color centers.	06 L
2.2	Line defects : Edge and Screw Dislocations, Mechanical Properties and Reactivity of Solids.	04 L
2.3	Surface Defects : Grain Boundary and Stacking Fault. Dislocation and Grain Boundaries, Vacancies and Interstitial Space in Non- Stoichiometric Crystals, Defect Clusters, Interchangeable Atoms and Extended Atom Defects.	05 L

	Module– III	
3.	Inorganic materials I	15
2.1	Mothoda of Symthodia	
	Methods of Synthesis:	04 L
	Chemical Method,	L
	High Pressure Method,	
	Arc Technique and	
	Skull Method (with examples).	
3.2	Different methods for single crystal growth:	04
	 i.Crystal Growth from Melt-: Bridgman and Stockbargar, Czochralski and Vernuil methods. ii.Crystal growth from liquid solution: Flux growth and temperature gradient methods 	L
	iii.Crystal growth from vapor phase: –Epitaxial growth methods.	
3.3	Thin film preparation: Physical and Chemical methods.	02 L
3.4	Solid Solutions: Formation of Substitutional, Interstitial and Complex Solid Solutions; Mechanistic Approach; Study of Solid solutions by X-ray Powder Diffraction and Density Measurement.	05 L
	Module– IV	
4	Applications of group theory- electronic structures	15 L
4.1	Recapitulation: point groups, character tables	02 L
4.2	Molecular Orbital Theory of Inorganic Compounds, Symmetry adapted linear combinations, symmetry aspects of MO theory, sigma and pi- bonding for H ₂ +, H ₂ , AB (LiH), AB ₂ (BeH ₂), AB ₃ (BH ₃), AB ₄ (CH ₄)(tetrahedral, square planar), AB ₅ (TBP) AB ₆ molecule and bond order.	09 L
4.3	Molecular orbitals for inorganic cage and cluster compounds such as B_6H_6 , metal sandwich compounds such as ferrocene and dibenzene chromium.	04 L

Inorganic Chemistry Semester III Course Code –PSICH 302 Coordination Chemistry

	Module I	
1	Synthesis, Structure, Bonding, and Stereochemistry	15 L
1.1	Synthesis of Coordination Compounds i.Addition Reactions ii.Substitution Reactions iii.Redox Reactions iv.Thermal Dissociation of Solid Complexes v.Reactions in Absence of Oxygen vi.Reactions of Coordination Compounds Vii Trans Effect	07 L
1.2	Structure and Bonding i.Molecular Orbital Theory for Complexes with Coordination Number 4 and 5 for the central ion (sigma as well as Pi bonding) ii.Angular Overlap Model	04 L
	Stereochemistry of Coordination Compounds Chirality and Fluxionality of Coordination Compounds with Higher Coordination Numbers. Geometries of Coordination Compounds with coordination no. 6 to 9.	04 L
	Module – II	
2	Reactivity of Chemical species Reactivity Matrix of Lewis Acids and Bases	15 L
2.1	Acidity and Basicity Parameters	03 L
2.2	Measures of hardness and Softness of Acids and Bases;	03 L
2.3	Pauling and Drago-Wayland Equation	04 L
2.4	Redox Reactions in Aqueous, Non- Aqueous and Solvent Free Media	02 L
2.5	Latimer Diagrams	01 L
2.6	5	01 L
2.7	Frost diagrams	01 L
	Module – III	
3	Schiffs base ligands and their complexes	15 L

	M.Sc. – II Inorganic Chemistry Semester III Course Code - PSAIPCH 303	
	Advanced Instrumental Techniques and Surface	
	Characterization Chemistry	,
	Advanced Instrumental Technique	
1	Module I: Mossbauer and Raman spectroscopy	15 L
1.1	Mossbauer's spectroscopy : Principle, recoilless emission absorption of gamma rays, experimental methods, instrumentation- drive mechanism, sources, detectors, absorbers effect, calibration of instrument, isomer shift, hyperfine structure (quadruple interactions), magnetic hyperfine interaction, applications, purity and characterization, detection of structurally different atoms in polynuclear compounds of Iron and Tin	07 L
1.2	Raman Spectroscopy: Theory of excitation of Raman spectra, mechanism of Raman and Rayleigh scattering, comparison of Raman and Infra-red spectra. Intensity of normal Raman peaks, instrumentation, organic and inorganic applications, surface enhanced Raman spectroscopy, resonant Raman spectroscopy, Non-linear Raman spectroscopy.	08 L
2	Module II: ESR and Hyphenated techniques	15 L
2.1	ESR: Principle, instrumentation, spin-spin splitting, qualitative and multiple resonance (ENDOR, ELDOR) spin labelling, metallic complexes, applications.	07 L
2.2	Hyphenatedtechniques:Needforhyphenation, possiblehyphenation, interfacing devicesand applications of GC-MS, GC-IR, MS-MS, LC-MS, LC-IR, LC-NMR.	08 L
3	Module III:X-ray spectroscopy and thermal methods	15 L
3.1	X-ray spectroscopy : Principles, instrumentation and applications of X-ray fluorescence, X-ray absorption and X-ray diffraction spectroscopy.	07 L
3.2	Thermal methods : Principle, instrumentation and applications of: differential thermal analysis (DTA), differential scanning calorimetry (DSC), thermometric titrations, thermo mechanical analysis (TMA), simultaneous thermal analysis (STA), evolved gas analysis (EGA), application in material science.	08 L

4	Module IV: Surface Characterizationby spectroscopy and	15 L
	microscopy	
4.1	Introduction to study of surfaces, definition of a solid surfaces, types of surface measurements, general techniques in surface spectroscopy, surface spectroscopic methods, sampling surfaces, surface contaminants.	02 L
4.2	X-ray photoelectron spectroscopy (XPS)	02 L
4.3	Auger electron spectroscopy	02 L
4.4	Basic principle, Instrumentation and applications of Electron microprobe, SEM,TEM and AFM	09 L

	M.Sc. – II Chemistry	
	Semester III: Course Code - PSAIPCH 304 Nano Chemistry and Some Important Industrial Materials	
1	Module I: Nano chemistry 1:	15 L
1.1	Introduction, comparison between bulk and nano materials. Types of nano materials-zero, one, three dimensional nanomaterials.	02 L
1.2	Synthesis of nanomaterials: Physical methods, Chemical methods and biological methods.	06 L
1.3	Properties of nano material with respect to Au, CdSe ₂ , Silica, PolydimehtylSiloxane-mechanical, structural, melting, electrical, optical and magnetic properties.	
2	Module II: Nano chemistry 2:	15 L
2.1	Some important nanomaterials- carbon nanotubes, porous silicon, mesoporous materials, aerogels, ordered porous materials, self-Assembled nano materials and core shell particles.	09 L
2.2	Applications of nanomaterials in electronics, energy, automobiles, sports, textiles, cosmetics, domestic appliances, biotechnology, medical fields and space and research. Environmental effects of nanotechnology.	06 L
3	Module III: Paints, pesticides and detergents	15 L
3.1	Paints: Introduction, determination of volatile and non-volatile components, water content of paints, flash point, separation of pigments, binders and thinners of different types, identification and analysis of different types of pigments, organic and inorganic pigments, white tinted and coloured pigments.	06 L
3.2	Pesticides : Introduction, definition, classification, biodegradation and determination of pesticides. pesticide residue analysis, extraction and cleavage of various type of pesticides, use of instrumental method like GLC, TLC, etc.	06 L
3.3	Detergents : classification, general scheme of analysis, quantitative method of analysis, active ingredient and equivalent combined SO ₃ analysis.	03 L

4	Module IV: Petrochemical, explosives, glass and alloys	15L
4.1	Petrochemical analysis: Introduction, definition-fuels, calorific values of fuel, composition and properties of fuels, analysis of petrochemicals, distillation range, moisture content, flash point, fire point, sulphur and carbon residue, doctor test.	04 L
4.2	Explosives: definition, heat of explosion, qualitative tests for explosives, quantitative methods for explosive mixtures.	04 L
4.3	Alloys: definition, analysis of copper based alloys, aluminum and stainless steel.	03 L
4.4	Glass : analysis of different types of glass, soda lime glass, lead glass and borate glass.	04 L

M. Sc. II Inorganic Chemistry Syllabus

Inorganic Chemistry Practical PSICH304

	Fractical PSICh504	
	Analysis of commercial samples	
1	Electral powder for sodium content by flame photometrically	
2	Sea water for percentage of salinity by Volhard's method	
3	Fertilizers for potassium content by flame photometrically	
4	Cement for its Iron content by redox titration	
5	Bleaching powder for its available chlorine content by iodometric method	
6	Nycil powder for zinc content by complexometrically	
7	Preparation of ZnO and Ag metal nanoparticles.	
8	Determination of Na in cold drinks and fruit juices using flame photometric	
	techniques.	
	References:	
	1.A. I. Vogel, Quantitative Inorganic Analysis	
	2.G. Raj, Advanced Practical Inorganic Chemistry	
	3.P. C. Kamboj, University Practical Chemistry	

M.Sc. – II

Inorganic Chemistry Semester IV Course Code -- PSICH 401 Inorganic Materials & Group Theory

	Module I	
1	Inorganic Materials II	15 L
1.1	Diffusion in Solids : Fick's Laws of Diffusion (numerical problems expected); Kirkendall Effect; Diffusion and Applications of Diffusion in Carburizing and non-Carburizing Processes in Steel Making, Impurity diffusion into silicon wafers for integrated circuits.	06 L
1.2	Liquid Crystals : Introduction and classification of thermotropic liquid crystals, Polymorphism in liquid crystal, Properties and applications of liquid crystals, growth of silicon single crystal.	05 L
1.3	Optical properties: Color Centres and Birefringence; Luminescent and Phosphor Materials; Coordinate Model; Phosphor Model; Anti Stokes Phosphor.	04 L
	Module – II	
2	Mechanical properties of solid materials:	15 L
2.1	Stress and strain in metals- Engineering stress and engineering strain, shear stress and shear strain, the tensile test and engineering stress - strain diagram, modulus of elasticity, yield strength.	05 L
2.2	Hardness and hardness testing, plastic deformations of metal single crystals, plastic deformation of polycrystalline metals, solid solution strengthening of metals.	
2.3	Fracture of metals-ductile and brittle fracture, toughness and impact testing, fatigue of metals, the creep test, creep-rupture test.	05 L
	Module – III	
3	Properties of Inorganic Materials	15 L
3.1	Magnetic Properties : Theory of magnetism, diamagnetism, paramagnetism, ferromagnetism and antiferromagnetism, Curie and Curie-Weiss laws, Faraday's method of determination of magnetic susceptibility.	05 L

Structure and Properties of (i) Metals and Alloys (ii) Transition Metal 05 L Oxides; (iii) Spinels; (iv) Ilmenites; (v)Perovskiteand (vi) Magnetoplumbites. 3.2 (b) Thermal **Properties**:Introduction, Heat Capacitiyand its 02 L Temperature Dependance; Thermal Expansion of Metals; Ceramics and Polymers and Thermal Stresses. 3.3 Electrical properties: 03 L Conductivity: Solid Electrolytes; Fast Ion Conductors; Mechanism of Conductivity; Hopping Conduction. Other Electrical Properties: Thomson and Seebeck Effects; Thermocouples and their Applications; Hall Effect; Dielectric, Ferroelectric, Piezoelectric and Pyroelectric Materials and their Inter-relationships and Applications. Module - IV **Application of Group Theory-Spectral properties** 4 15 L 4.1 Ligand Field Theory: Electronic structures of Free Atoms and Ions; Splitting of 05 L Levels and Terms in а Chemical **Environment:** Construction of Energy Level Diagrams. 4.2 Correlation Diagrams for d² ions in octahedral and tetrahedral ligand field; Method 03 L of Descending Symmetry; Hole Formalism. 4.3 Molecular Vibrations: The Symmetry of Normal Vibrations; Determining the 07 L Symmetry Types of the Normal Modes; Selection Rules for Fundamental Vibrational Transitions (IR and Raman) and Interpretation of IR and Raman Spectra e.g. H₂O, CO₂, HF, H₂; comparison of IR and Raman selection rules. **References:** Module I/II/III A. M.Sc. – II

Inorganic Chemistry Semester IV Course Code -- PSICH 402 Applications of Inorganic Compounds and Nuclear Chemistry

	Module I	
1	Preparation, properties and uses of Industrially important chemicals	15 L
	Lime, Chlorine and Caustic soda, Cement Inorganic explosives (mercury fulminate, Lead azide); Fertilizers and micronutrients Glass	09 L
	Potassium permanganate, Sodium thiosulphate, Bleaching powder, Hydrogen peroxide, Potassium dichromate.	06 L
	Module – II	
2	Metallurgy	15 L
2.1	Occurrence, extraction and metallurgy of Zirconium, Hafnium, Niobium, Tantalum, Platinum and Palladium metals.	09 L
2.2	Physical and chemical properties, applications and compounds of these metals.	06 L
	Module - III	
3	Chemistry of Non Heme proteins	15 L
3.1	Coordination geometry of the metal ion and functions.	03 L
3.2	Zn in biological systems: Carbonic anhydrase, protolytic enzymes, e.g. carboxypeptidase, Zinc finger.	03 L
3.3	Role of metal ions in biological electron transfer processes Copper containing proteins and enzymes.	05 L

3.4	Less common ions in biology e.g. Co, Ni, V Metallothioneins, Biomineralization	04 L
	Module – IV	
4	Nuclear Chemistry and Inorganic Pharmaceuticals	15 L
4.1	Introduction of nuclear fuels and separation of fission products from spent fuel rods by PUREX process. Super heavy element:, Discovery, preparation, position in the periodic table.	08 L
4.2	Inorganic Pharmaceuticals: Compounds of iron, calcium and lithium, gold antiarthritic drugs, anticancer drugs, radiopharmaceuticals containing Tc, Ga and Xe isotopes, contrast agents for X-ray and NMR imaging.	07 L

M.Sc. – II

Inorganic Chemistry Semester IV Course Code -- PSICH 403 Applications of Inorganic Spectroscopy

	Module I	
1	Vibrational Spectroscopy & Diffraction Methods	15 L
1.1	Symmetry and shapes of AB ₂ , AB ₃ , AB ₄ , AB ₅ and AB ₆ molecules.	07 L
	Mode of bonding of ambidentate ligands, ethylenediamine and diketonato complex. Applications of resonance Raman spectroscopy for the study of active sites of	
	metalloproteins, metal-nitrogen, metal-sulphur. Electron Diffraction:	04 L
1.2	Scattering intensity vs. scattering angle, wierl equation, measurement technique, elucidation of structure of simple gas phase molecule, Low energy electron diffraction and structure of surface.	04 L
1.3	Neutron Diffraction:	04 L
	Scattering of neutron by solids and liquids, maganetic scattering, Measurement technique, Elucidation of structure of magnetically ordered unit cell.	
	Module – II	
2	Electronic Spectroscopy:	15 L
2.1	Atomic Spectroscopy:	04 L
	Energies of atomic orbitals, vector representation of momenta and vector coupling, spectra of hydrogen atom and alkali atoms.	
2.2	Molecular Spectroscopy:	07 L
	Energy level, molecular orbitals, vibronic transition, vibrational progressions and geometry of the excited states. Franck-Condon Principle, electronic spectra of polyatomic molecule, emission spectra, radiative and non radiative decay, internal conversion, spectra of transition metal complexes, charge transfer spectra.	
2.3	Photoelectron Spectroscopy:	04 L

		
	Basic principles, photo-electric effect, ionization process, koopman	
	theorem,photoelectron spectra of simple molecules, ESCA,	
	chemical information from ESCA.	
	Module – III	
3	NMR, NQR and ESR spectroscopy of Inorganic compounds	15 L
3.1	Nuclear Magnetic Resonance:	07 L
	The contact and pseudocontact shifts, Factors affecting nuclear relaxation, NMR of	
	metal nuclides with emphasis on ¹⁹⁵ Pt and ¹¹⁹ Sn spectra, Measurements of	
	paramagnetic susceptibilities of coordination compounds.	
3.2		05 L
	Quadrupole nuclei, quadrupole moments, electric fields gradient, coupling	
	constant, splitting, application.	
3.3	Electron Spin Resonance:	03 L
_		
	Application of ESR and magnetic susceptibility studies of metal complexes:	
	interpretation of ESR spectra of Cu(II) complexes (octahedral, square planar and	
	tetragonal complexes) and susceptibility results for the same.	ļ
	Module – IV	
4	Inorganic Photochemistry and Spectroscopic Method	15 L
4.1	Inorganic Photochemistry:	05 L
	Luminescence: Fluorescence and Phosphorescence of Transition and Inner	
	Transition Elements.	
	Prompt and Delayed Reactions	
	Spectroscopic methods viz., Job's method, mole-ratio and slope-ratio	05 L
	methods for determination of stepwise formation constants of metal complexes.	00-
4.3		05 L
4.5	planar complexes for d8 ions [Ni(II), Pd(II), Pt(II)], IR and Raman spectroscopy	
	with reference to metal- nitrogen, metal-oxygen and metal-sulfur bonds.	
		4

	M.C. II]
	M.Sc. – II	
	Chemistry Semester IV	
	Course Code - PSCH 404	
	Environmental and Green Chemistry	
	Environmental chemistry	
	Module I: Air and Water Pollution	15 L
1	Air pollution:	07 L
1.1	Natural and anthropogenic sources of pollution, primary and secondary pollutants, transport and diffusion of pollutants, gas laws governing the behaviour of the pollutants in the atmosphere.	03 L
1.2	Sampling and analysis of: particulate matter, aerosols, SO ₂ , H ₂ O, NO _x , CO, NH ₃ , organic vapours.	03 L
1.3	Effect of pollutants on human beings, plants, animals, materials and on climates.	01 L
	Water pollution:	08 L
1.4	Sources of water pollution, basic chemistry of water pollutants, effects and control.	02 L
1.5	Determination of water pollution parameters and their significance.	01 L
1.6	Physical parameters: colour, pH, Temperature, odour, turbidity, density, TOS, TSS,TDS.	02 L
1.7	Chemical parameters- acidity, alkalinity, hardness, DO, COD, BOD, TOC, THOD, MPN, biological parameters.	02 L
1.8	Heavy metal pollutants like Hg, Pb, Cd, As, Cu, Cr with respect to their sources, Distribution, speciation, toxic effect, control, treatment.	02 L
	Module II: Pollution control technology	15 L
	Air pollution control technologies: methods to control air pollution in the environment, Limestone injection and fluidised bed combustion, desulphurisation, catalytic convertor and control of vehicular emission, gravity setting chamber, fabric filters.	05 L
2.1	Solid Waste disposal : solid waste disposal methods- open dumps, ocean dumping, land-fills, incineration, recycling and reuse, organic pollutants and hazardous waste disposal and management, non-destructive solid waste, biomedical waste.	05 L

Project and Dissertation

In semester IV the student will not have any practical courses instead students will be undertaking project work of duration 4 months in the college laboratories.

Project work goals:

- The students will learn the skills required to succeed in industry or professional school.
- The students will learn and will be exposed to a breadth of experimental techniques using modern instrumentation.
- The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.
- The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature.
- The student will develop the ability to effectively communicate scientific information and research results in written and oral formats.
- The student will learn professionalism, including the ability to work in teams and apply basic ethical principles.
